

Translate a Webpage to a Different Language (must use Chrome browser)

1. On the webpage you want to translate, right click on the webpage. Then click "Translate to...".

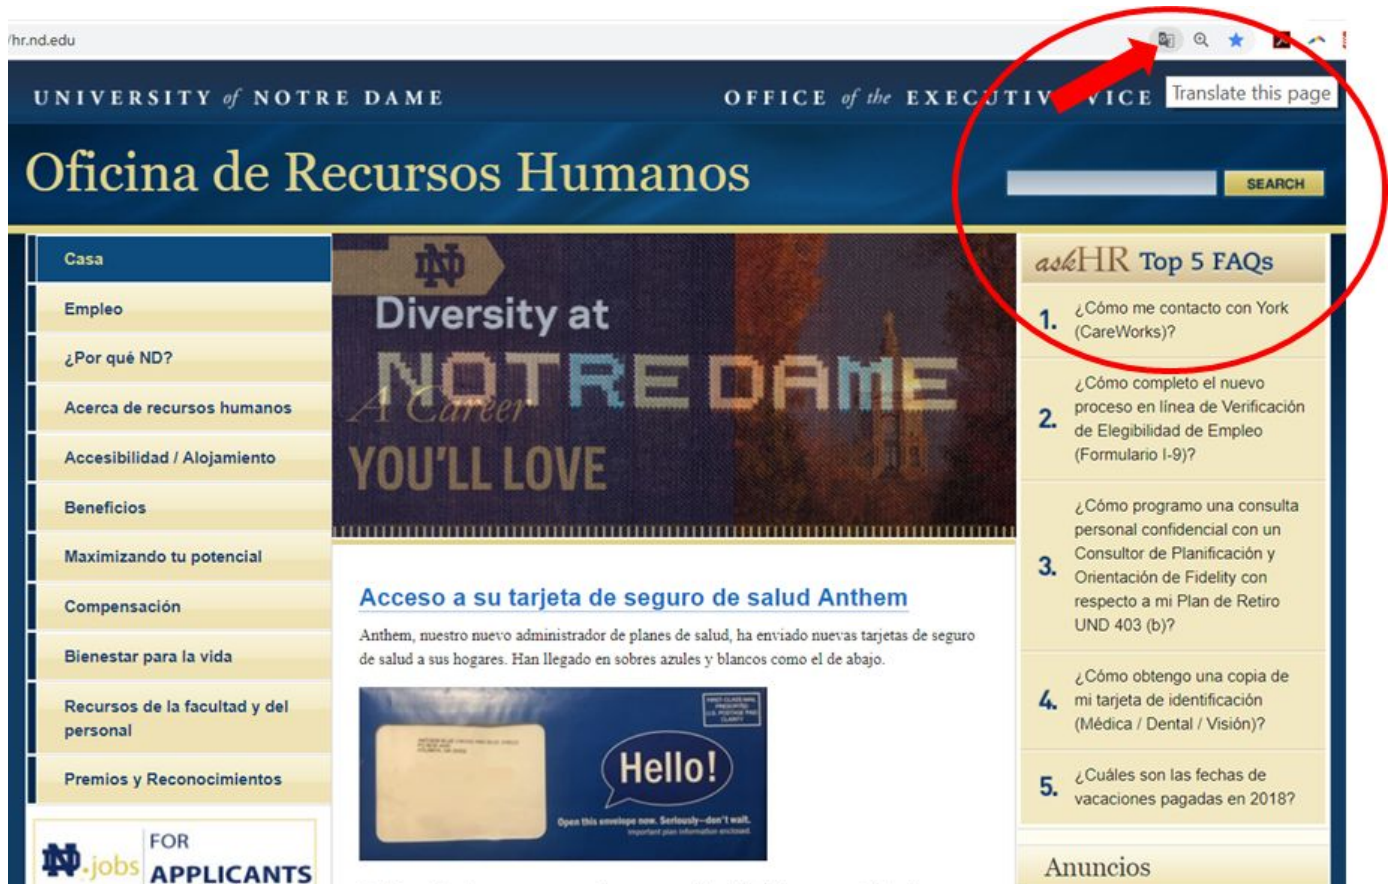

The screenshot shows the University of Notre Dame Office of Human Resources website. The main header reads "Office of Human Resources" with a search bar. A navigation menu on the left includes links for Home, Employment, Why ND, About HR, Accessibility / Accommodation, Benefits, Maximizing Your Potential, Compensation, Well-Being for Life, Faculty & Staff Resources, and Awards & Recognition. The main content area features a banner for "Diversity at NOTRE DAME" with the text "A Career YOU'LL LOVE". Below the banner is an article titled "Accessing your Anthem health insurance card" with a sub-image of a health insurance card that says "Hello!". A right-click context menu is open over the article, with a red arrow pointing to the "Translate to English" option. Other menu items include Back, Forward, Reload, Save as..., Print..., Cast..., Add to Todoist, Adobe Acrobat, View page source, and Inspect. On the right side of the page, there is a "askHR Top 5 FAQs" section with five numbered questions.

2. Select "Options" then "Change Language". Set the language, then select "Translate".

This screenshot shows the same website as the first image, but with the translation options dialog box open. The dialog box has a title bar "Options" and contains the following fields: "Page language:" set to "English", "Translation language:" set to "Spanish", and an unchecked checkbox for "Always translate". There are "Translate" and "Cancel" buttons at the bottom of the dialog. A red arrow points to the "Translate" button. The background of the website is slightly dimmed, showing the same navigation menu and main content area as in the first image.

Translate a Webpage to Back to English (must use Chrome browser)

1. Click on the icon to the left of the star in the address bar.

2. Then select "Show original".
